anti-inflammatory agent as a nanagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 are analogue is useful as an anti-inflammatory agent to block as the effects of MCP-1 which is an inflammatory mediator causing migration inflammatory alsases and other cells e.g. basophils and lymphocytes into inflammatory diseases e.g. arthritis, arteriosclerosis and chronic diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably with 75:1 for prior art mutant 7ND.
N-terminal amino acids 1-8 of MCP-1, acts as an antagonist of MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammatory affects. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung MCP-1 receptors than prior art mutant versions of MCP-1 for binding providing 50% inhibition of binding at a 25:1 ratio or less, compared Sequence 68 AA;
                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò

Human monocyte chemo-attractant protein-1 (MCP-1) derivs. - are rapid and monocyte chemo-attractant activity of capable of inhibiting the monocyte chemo-attractant activity of andogenous MCP-1 and can be used to treat restenosis

For capable of inhibiting the monocyte chemo-attractant activity of endogenous

Some concyte chemoattractant protein 1 (MCP-1) derivatives are mutated such

MCP-1, provided that the derivative has not been modified by the

MCP-1, provided that the derivative has not been modified by the

MCP-1, provided that the derivative has not been modified by the

Substitution of 28 Tyr by aspartate: (2) substitution of 24 Arg

are: (1) substitution of 3 Tyr by aspartate: (2) substitution of 44 Arg

are: (1) substitution of 3 Tyr by aspartate: (2) substitution of amino

C by Phe; (3) substitution of 3 Tyr by aspartate: (2) substitution of amino

C acids 2-8. The present sequence is a specifically claimed human MCP-1

acids 2-8. The present protein disclosed in Rollins, Molecular

derivative based on the parent protein disclosed in Rollins, Molecular

C The peptides can be used to prevent restenosis, e.g. in patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Anti-sense Monocyte Chemotactic Protein-1 oligo:nucleotide(s) -
Anti-sense Monocyte chaquosis of restenosis, etc.
Disclosure, Column 13-14; 16pp; English.
This is the amino acid sequence of the human monocyte chemoattractant
This is the amino acid sequence of the human monocyte chemoattractant
This is the amino acid sequence of the human monocyte chemoattractant
This is the amino acid sequence of the co-c chemokine family. MCP-1 is a potent
stimularor of monocyte chemotaxis and is produced by injured vascular
stimularor of monocyte chemotaxis and is produced by injured vascular
smooth cells thus attracting monocytes and macrophages which infiltrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

PT capable of inhibiting the monocyte chemo-attractant activity of endogenous MCP-1 and can be used to treat restenosis

T endogenous MCP-1 and can be used to treat restenosis

C Monocyte chemoattractant protein-1 (MCP-1) derivatives are mutated such that they inhibit the monocyte chemoattractant activity of endogenous

C MCP-1, provided that the derivative has not been modified by the cubstitution of 28-Tyr by Leu and/or 30-Arg by Val. Preferred mutations

C are: (1) substitution of 28-Tyr by aspartate: (2) substitution of 24 Arg

C are: (3) substitution of 3-Asp by Ala; and/or (4) deletion of amino caids 2-8. The present sequence is a specifically claimed human MCP-1

and Cellular Biology, Vol. 9, No. 11, pp. 4687-4695, Nov. 1989.

C The peptides can be used to prevent restenosis, e.g. in patients

The present sequence represents a monocyte chemoattractant peptide (MCP) The present sequence represents a monocyte chemoa gill interesting the present sequence) and peripheral blood mononuclear leukocytes. MCPs are used for the treatment of neoplasms and infections in humans. Short peptides derived from MCPs can be screened to identify those that can bind to the monocyte receptor without stimulating a chemotactic response. These are potentially useful for treating inflammation associated with monocyte infiltration.

Sequence 76 AA;
                                                                                                                                                           01-JUL-1998 (first entry)
Macrophage chemoattractant peptide designated GDCF-2.

Disclosure; Page 12; 22pp; Japanese.
The invention relates to a new remedy for curing wounds which, instead of comprising a growth factor, comprises a monocyte chemotactic activating factor (WARF) or its variants or derivatives. The factor has potent effect on skin wounds and ulcers. The present sequence is human MCAF, the activity of which is exemplified as the new remedy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "Arg in the native sequence is replaced by Phe"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The sequences given in R53398-99 represent sense and antisense monocyte chemotactic protein-1 (MCP-1) respectively. These monocyte chemotactic protein-1 (MCP-1) respectively. These oligonotleotides may be labelled with a radionuclide and use oligonotleotides may be constructed using Radiolabelled antisense MCP-1 compounds may be constructed using high energy alpha or beta emitting isotopes rather than the gamma energy alpha or beta emitting isotopes rather than the gamma emitters cutomarily used for diagnostic purposes. Antisense MCP-1 compounds inactivate MCP-1 or inhibit production of MCP-1 so that monocytes are not attracted to the area of vascular injury and proliferation of vascular cells is inhibited.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-MAR-1996 (first entry) Monocyte chemotactic activating factor for use as wound remedy. Monocyte chemotactic activating factor; MCAF; wound remedy.

FEBS LETT. 395:277-28(1996).
-!-FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS MONOCYTES AND BASOPHILS
BUT NOT NEUTROPHILS OR EOSINOPHILS. AUGMENTS MONOCYTE ATTI-TUMOR ACTIVITY. HAS BEEN IMPLICATED IN THE PATHOGENESIS OF DISEASES CHARACTERIZED BY MONOCYTIC INFIGRATES, LIKE PSORIASIS, RHEUMATOLD OF MONOCYTES INTO THE ARTERIAL WALL DURING THE DISEASE PROCESS OF ATHEROSCLEROSIS.
                                                                                                                                                                                                                                                                                                                                                    SUBUNIT: MONOMER OR HOMODINER: IN EQUILIBRIUM.

CHAIR PROCESSING AT THE N-TERMINUS CAN REGULATE RECEPTOR AND TARGET CELL SELECTIVITY. DELETION OF THE AMINO- TERMINAL RESIDUE CONVERS IT FROM AN ACTIVATOR OF BASOPHIL TO AN EOSINOPHIL CHEMOATTRACTANT.

SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC).

1. FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS MONOCYTES, LYMPHOCYTES,
BASOPHILS AND EOSINOPHILS, BUT NOT NEUTROPHILS. SIGNALS THROUGH
CCR2B AND CCR3 RECEPTORS. PLAYS A ROLE IN THE ACCUMILATION OF
LEDKOCYTES AT BOTH SIDES OF ALLERGIC AND NONALLERGIC INFLAMMATION.
MAY BE INVOLVED IN THE RECRUITMENT OF MONOCYTES INTO THE ARTERIAL
WALL DURING THE DISEASE PROCESS OF ARTHEROSCLEROSIS. MAY PLAY A
ROLE IN THE MONOCYTE ATTRACTION IN TISSUES CHRONICALLY EXPOSED TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

human stronmal cell-derived chemokine, SDF-1 - useful for treating
human stronmal cell-derived chemokine, SDF-1 - useful for treating
human immunodeficiency virus infection

Claim 2: Page 29; 48pp; French.

The invention relates to peptides which bind to a cellular receptor for
cx chemokines, namely the CXCX4 receptor (also known as leukocyteexpressed transmembrane domain receptor), especially where the
cxt shuman chemokine SDF-1. The peptide can be used to treat or
peptide is human chemokine SDF-1. The peptide can be used to treat or
creceptor antagonists, inmunotherapy agents, agents for treating HIVcascolated opportunistic infections and/or other CXC or Cc chemokines,
cascolated opportunistic infections and/or other CXC or Cc chemokines,
cascolated opportunistic infections and/or other CXC or Cc chemokines,
cascolated opportunistic infections and/or other CXC or Cc chemokines,
cascolated operations and the context of the peptide can be
used to detect anti-SDF-1 antibodies in biological fluids. This
sequence represents a specifically claimed peptide which binds to the ö 27-JUL-1998 (first entry)
Peptide which binds to CXCR4 receptor and is useful for treating HIV.
Stromal cell-derived chemokine; SDF-1; human immunodeficiency virus;
HIV; CXCR4 receptor; leukocyte-expressed transmembrane domain receptor.

Human strondl cell-derived chemokine, SDF-1 - useful for treating human jarnunodeficiency virus infection.

Claim 5; Page 29; 48pp; French.

Claim 5; Page 29; 48pp; French.

CX chemokines, namely the CXCR4 receptor (also known as leukocyterox chemokines, namely the CXCR4 receptor; especially where the experience of transmembrane domain receptor; especially where the peptide is human chemokine SDF-1. The peptide can be used to treat or prevent HIV infections, optionally together with reverse transcriptase inhibitors, viral protease inhibitors, soluble CD4 receptors, CD4 associated opportunistic infections and/or other CXC or C chemokines, especially RANTES, MIPI- alpha, MIPI- beta or MCPI. The peptide can be sequence represents a specifically claimed peptide which binds to the converse of the converse o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPF, 98-12303912.

Human stromal cell-derived chemokine, SDF-1 - useful for treating human stromal cell-derived chemokine, SDF-1 - useful for treating human stromal cell-derived chemokine, SDF-1 - useful for treating human immunodeficiency virus infection.

The invention relates to peptides which bind to a cellular receptor for CXC chemokines, namely the CXCR4 receptor (also known as leukocyte-corporations), especially where the expressed transmembrane domain receptor), especially where the peptide is human chemokine SDF-1. The peptide can be used to treat or prevent HIV infections, optionally together with reverse transcriptase inhibitors, viral protease inhibitors, soluble CD4 receptors, CD4 sosociated opportunistic infections and/or other CXC or CC chemokines, especially RANTES, MIPI- alpha, MIPI- beta or MCPI. The peptide can be sequence represents a specifically claimed peptide which binds to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                  27-JUL-1998 (first entry)
Peptide which binds to CXCR4 receptor and is useful for treating HIV.
Stromal cell-derived chemokine; SDF-1; human immunodeficiency virus;
HIV; CXCR4 receptor; leukocyte-expressed transmembrane domain receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide which binds to CXCR4 receptor and is useful for treating HIV. Stromal cell-derived chemokine; SDF-1; human immunodeficiency virus; HIV; CXCR4 receptor; leukocyte-expressed transmembrane domain receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                             human immunodeficiency virus infection
Claim 5; Page 29; 48pp; French.
CC chemokines, namely the CXCR4 receptor (also known as leukocyte-expressed transmembrane domain receptor), especially where the peptide is human chemokine SDF-1. The peptide can be used to treat or prevent HIV infections, optionally together with reverse transcriptase inhibitors, viral protease inhibitors, soluble CD4 receptors, CD4 associated opportunistic infections and/or other CXC or CC chemokines, especially RANTES, MIP1- alpha 'MP1- beta or MCP1. The peptide can be used to detect anti-SDF-1 antibodies in biological fluids. This

Peptide which binds to CXCR4 receptor and is useful for treating HIV.
Stromal cell-derived chemokine; SDF-1; human immunodeficiency virus;
HIV; CXCR4 receptor; leukocyte-expressed transmembrane domain receptor.

     PT Human stromal cell-derived chemokine, SDF-1 - useful for treating pr human stromal cell-derived chemokine, SDF-1 - useful for treating pr human immunodeficiency virus infection

PS Claim 10; Page 30; 48pp; French.

CC The invention relates to peptides which bind to a cellular receptor for cxC chemokines, namely the CXCR4 receptor; especially where the expressed transmembrane domain receptor), especially where the cxpressed transmembrane and sDF-1. The peptide can be used to treat or peptide is human chemokine SDF-1. The peptide can be used to treat or cc prevent HIV infections, optionally together with reverse transcriptase prevent HIV infections, optionally together with reverse transcriptase conhibitors, viral processe inhibitors, soluble CD4 receptors, CD

Protein encoded by cDNA derived from mouse stroma; cell line; ST2, primer; polymerase chain reaction; amplify; PCR; linker; plasmid; expression vector; pSRT; infection; transformation; E.coli DH5 alpha; cDNA library; signal peptide;
     diseases, infectious diseases, AIDS or neuro:degenerative diseases claim 2: Page 22: 43pp; English.

A cDNA library prepared from human pro-B cell line FLEB14 cells was soreened with 32P-labeled mouse SDF-1-alpha cDNA. A positive clone contained an insert of 1.9 kb (Q74089), including an ORF (Q74088) encoding human SDF-1-alpha (R75419). Recombinant hSDF-1-alpha was produced in E. coli and COS cells.

Claim 3; Page 13-14; 26pp; English.

This cDNA which was derived from the mouse strong encoded by CDNA which was isolated using the strong cell line, ST2. This CDNA sequence was isolated using the strong cell line sT2.

Total RNA was extracted from ST2 and using a random hexmaer as a primer, single stranded DNA was Synthesised and a random hexmaer as a primer, single stranded DNA was synthesised using the GEORI was annealed, and double stranded CDNA was synthesised using the same primer. The resulting cDNA was fragmented and CNDAs of 200-500 bp same primer. The resulting cDNA was fragmented and CNDAs of 200-500 bp were isolated. After Dlunt-ending, a linker conty. a SacI site was ligated and the CDNAs again fractionated. Two primers, one with an ligated and the CDNAs again fractionated. Two primers, one with an ECORI site and one with a SacI site were then used for PCR. The ECORI and LINKER CDNAS of 200-500 amplified CDNA was digested with ECORI and SacI and CDNAS of 200-500 amplified CDNA was digested with ECORI and ADARAS of 200-500 amplified CDNA was the standard and the CDNAS of 200-500 amplified CDNA was digested with ECORI and ADARAS of 200-500 amplified CDNA was the standard and the CDNAS of 200-500 amplified CDNA was digested with ECORI and SCORI and ADARAS OF 200-500 amplified CDNA was digested with a scoria standard and and and adapted and the CDNAS of 200-500 amplified CDNA was digested with a scoria standard and and adapted and the CDNAS of 200-500 amplified CDNA was digested with a scoria standard and and and adapted and adapted and and adapted and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              by fractionated. The CDNA was then ligated into a plasmid obtd. by digestion of the expression vector, pSRT. After transformation of an digestion of the expression vector, pSRT. After transformation of an E.coli DH5 alpha strain, a cDNA library having selectivity for signal peptides was obtained. The protein encoded by the isolated sequence is a useful agent in the treatment or prevention of anaemla, leukopaenia or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Figure 5: 48pp: French.

The invention relates to peptides which bind to a cellular receptor for the invention relates to peptides which bind to a cellular receptor for CXC chemokines, namely the CXCR4 receptor (also known as leukocytecxed transmembrane domain receptor), especially where the peptide is human chemokine SDF-1. The peptide can be used to treat or prevent HIV infections, optionally together with reverse transcriptase receptor antagonists, immunotherapy agents, agents CD4 associated opportunistic infections and/or other CXC or CC chemokines, cused to detect anti-SDF-1 antibodies in biological fluids. This can be Sequence represents human SDF-1.

Construct planted to neterologous polypeptide, used for, e.g. champtactic recruitment of migratory cells.

This sequence represents a human chemokine SDF-lalpha domain, isolated construct comprising an isolated polynucieotide encoding a chimeric construct comprises at least 1 chemokine polypeptide covalently construct comprises at least 1 chemokine polypeptide covalently attached to at least 1 heterologous polypeptide. By including a chimeric construct comprises at least 1 chemokine polypeptides covalently will have longer and increased biological activity and can direct the chemokine to a particular site. The chimeric polypeptides con also be constituted to a fact the chemokine receptors. They can be used casimost to inhibit or desenitise chemokine receptors. They can be used cartinage, ligament or tendon, for recruiting transplanted bone marrow colls to bone marrow, or for treating or preventing inflammatory or calls to bone marrow, or for treating or preventing inflammatory or continued the activity of antigen presenting cells and for treating or preventing HTV infection. Neutralising antibodies binding to the chimeric conscituted with the chemokine corresponding to the chemokine domain of sequence also polypeptide and also in the treatment of some forms of sequence also be useful therespectics for both conditions of sequence also bards and also in the creatment of some forms of sequence also be necessarily or the chemokine domain of sequence also be necessarily or the chemokine domain of sequence also be necessarily and the chemokine to the chemokine of the chemokine of the chemokine of the chemokine to the chemokine forms of the chemokine to the chemokine of the chemokine forms of the chemokine to the chemokine forms of the chemokine to the chemokine of the chemokine to the chemokine forms of the chemokine to the chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    02-DEC-1998 (first entry)
Human chemokine SDF-lalpha domain protein from clone SK2-2.
Chemokine, SDF-lalpha, chimeric; human; heterologous protein; inhibitor; receptor; chemotaxis; migratory cell; anglogenesis; bone; regeneration; autoimmune disorder; recein bone marrow; transplant; inflammation; Hum, human immunodeficiency virus; therapy; prevention.
               Polypeptide(s) used for treating diseases relating to undergrown or diseases, infections diseases, AIDS or neuro: degenerative diseases (laim 12: page 26-27; 43pp; English.

Claim 12: page 26-27; 43pp; English.

A oDNA library prepared from human pro-B cell line FLEBH4 cells was contained an insert of 3.5 kb (074091), including an ONF (074090) produced in E. cell and COS cells.
                                                                                                                                                                                                                                                                                                                                                                    0; Gaps

Provalently linked to heterologous polypeptide, used for, e.g.

covalently linked to heterologous polypeptide, used for, e.g.

chemotactic recruitment of migratory cells

procedured to recruitment of migratory cells

Claim 13h; Page 43-44; 69pp; English.

Claim 21h; Page 43-44; 69pp; English.

Crasquence represents a human chemokine spring in the production

from cDNA clones 51-2 and 51-3. This sequence is used in the production

from cDNA clones 51-2 and 51-3. This sequence is used in the production

of a construct comprises at least 1 chemokine polypeptide covalently

conserved to a least 1 heterologous polypeptide. By including a cherologous protein in the construction, the chimeric polypeptides

contact least 1 heterologous polypeptides and direct the increased biological activity and can direct the chemokine to a particular site. The chimeric polypeptides can also be designed to inhibit or desensitise chemokine receptors. They can be used designed to inhibiting angiogenesis, for regeneration of bone,

constructed to continue to a recruitment of migratory cells, e.g. for to affect the chemotactic recruitment of migratory cells, e.g. for cattlinge, ligament or tendon, for recruiting transplanted bone marrow cartillade, ligament or tendon, for recruiting transplanted bone marrow cartillade, ligament or tendon, for treating or preventing inflammatory or cells to bone marrow, or for treating or preventing inflammatory or cells to bone marrow, or for treating or preventing inflammatory or cells to enhance the activity of antigen presenting cells and for treating or enhance the activity of antigen presenting cells and for treating or the chimeric propertion wenture and an activity of antigen presenting antibodies binding to the chimeric propertion of propertions of the chimeric propertion of propertio

Human monocyte chemotactic factor type polypeptide and DNA Human monocyte chemotactic factor type polypeptide and DNA encoding it - useful as antibacterial and antitumour agents.

Claim 2: Page 25: 27pp; English.

Claim 2: Page 25: 27pp; English.

The sequence was deduced from Hum.

The sequence was deduced from the RNA extracted from the recombinant plasmids, PHMCF7, PHMCF2 and PHMCF29 which there isolated from a cDNA library prepd. from RNA extracted from vere isolated from a cDNA library prepd. from RNA extracted from vere isolated from a cDNA library prepd. Grand RNA extracted from vertors. In plasmids pHMCF7 and PHMCF29 bases 105 and 226 were cortors. In plasmids pHMCF7 and PHMCF29 bases 105 and 226 were cortors. In plasmids pHMCF7 and A resp. The A at posn.

The protein is therefore not determined and may be citer Ala or Thr. The protein may be produced by recombinant of the precential pacterial and is useful as a drug for treatment of cortors.
                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             07-NoV-1997 (first entry)
Monocyte chemoattractant protein analogue MCP-1 (10-76).
Truncated monocyte chemoattractant protein-1; inhibitor:
receptor binding; anti inflammatory; basophil; lymphocyte; allergy; chronic inflammatory disease; arthritis; arteriosclerosis;
associated with the chemokine corresponding to the chemokine domain of the chimeric polypeptide and also in the treatment of some forms of cancer where apportmal expression of the chemokine is involved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Cremontrarent protein-1 (MCP-1). The analogue, Which lacks the chemostractarent protein-1 (MCP-1). The analogue, which lacks the chemostractarent protein-1 (MCP-1). The analogue, which lacks the as in lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block of monocytes and other cells e.g. basophils and lymphocytes into inflammatory diseases. MCP-1 has been implicated in allergic and chronic confinamatory diseases e.g. arthritis, arteriosclerosis and chronic diseases. The analogue competes more effectively with MCP-1 for binding CC diseases. The analogue competes more effectively with MCP-1 for binding CC providing 50% inhibition of binding at a 25:1 ratio or less, compared Sciences 66 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents an analogue, MCP-1 (11-76), of monocyte changes a sequence represents an analogue, which lacks the changestrant protein-1 (MCP-1). The analogue, which lacks the N-terminal amino acids 1-10 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits bidding to a MCP-1 the effects of MCP-1 which is an inflammatory agent to block of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic diseases. The analogue competes more effectively with MCP-1 for binding providing 50% inhibition of binding at a 25:1 ratio or less, compared sequence 67 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 porcine alveolar macrophages.)

porcine alveolar macrophages.

J. BIOL. CHEM. 266.8455-8463(1991).

-i- FUNCTION: IL-8 IS A CHEMOTACTIC FACTOR THAT ATTRACTS NEUTROPHILS,

BASOPHILS, AND T-CELLS, BUT NOT MONOCYTES. IT IS ALSO INVOLVED IN

RESPONSE TO AN INFLAMMATORY STIMULUS.

-i- SUBUNIT: HOMODIMER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TISSUE-LUNG;

J. IMMUNOL. 151:6225-6236(1993).

-I- FUNCTION: IL-8 IS A CHEMOTACTIC FACTOR THAT ATTRACTS NEUTROPHILS,
BASOPHILS, AND T-CELLS, BUT NOT MONOCYTES. IT IS ALSO INVOLVED IN
NEUTROPHIL ACTIVATION. IT IS RELEASED FROM SEVERAL CELL TYPES IN
RESPONSE TO AN INTELAMENTORY STIMILUS (BY SIMILARITY).

-I- SIMILARITY: BELONGS TO THE INTERCRINE ALPHA FAMILY (SMALL CYTORINE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
